

Woman to Woman & THE MALE PERSPECTIVE

Specialist Laser & Beauty Studio

Laser hair reduction offers a safe, long-term solution to unwanted, excess hair for both women and men. Laser treatment is suitable for any area of the face and body, it's quick and results can be seen even after the first session!

During treatment a short pulse of light is emitted and selectively absorbed by the pigment (colour) in the hair follicles called melanin. The process is repeated until the entire area is treated.

Dark hair has a higher concentration of melanin (colour) so traditionally has been considered easier to treat. But with the Deka Motus AY True Medical Grade Alexandrite Laser being considered the 'old Standard' in Laser technology, therefore it can be used to treat more challenging fine and fair hair very effectively.

Treatment times can be as short as 10-15 minutes depending upon the area treated and hair sheds after 14 days. Only hair which is actively growing is affected, therefore a series of treatments are required.

Treatment is conducted every 4 to 8 weeks, depending on the area treated, until the desired result is achieved. This will vary depending on several factors but will be discussed fully at consultation, also the number of treatments needed varies, but typically 5 or more treatments are needed for optimum results.

Then invariably there are no more ingrowing hairs and no rashes. I've been told so often that it is life changing! This is the best Laser I've used in 22 years, so I've learnt to get the best out of it since March 2019, results are stunning!
